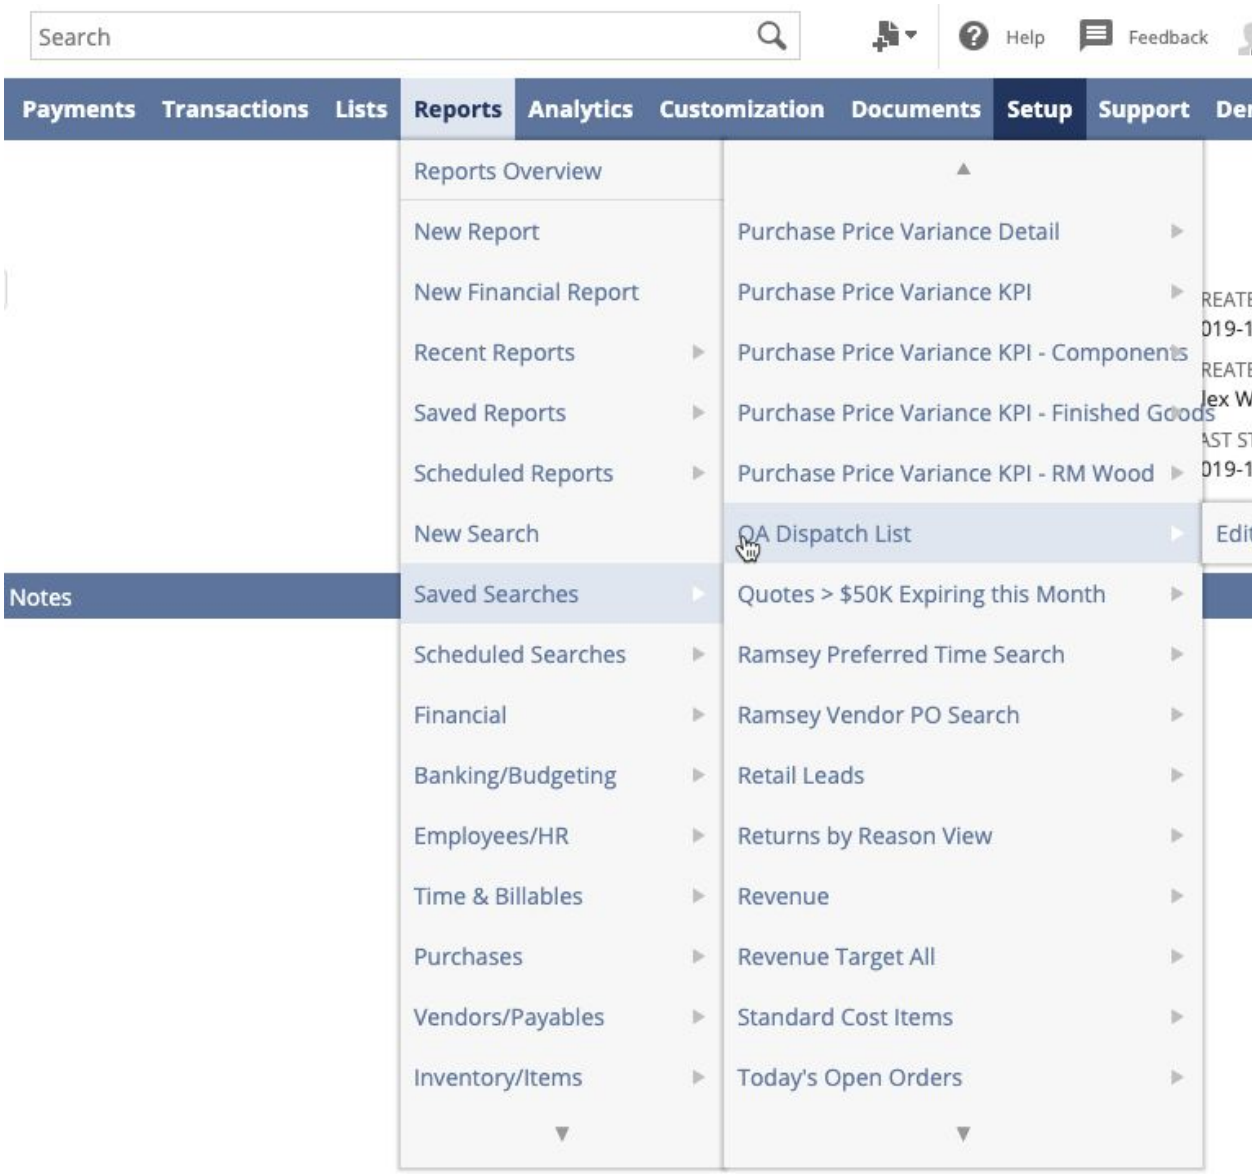
Netsuite Setup, Import and Exporting details

Netsuite Set up for Import:

Netsuite allows “Saved Searches” which can be used to create Searches that can be run on a daily basis. These results of these searches could, for example, be the orders to be fulfilled for the next day, regardless of when the search is run.

The Internal ID of a Saved Search can be used to fetch orders that can then be imported from Netsuite into DispatchTrack.

“Saved Searches” are accessible under
Main Menu -> Reports -> Saved Searches



Netsuite Token Based Authentication setup:

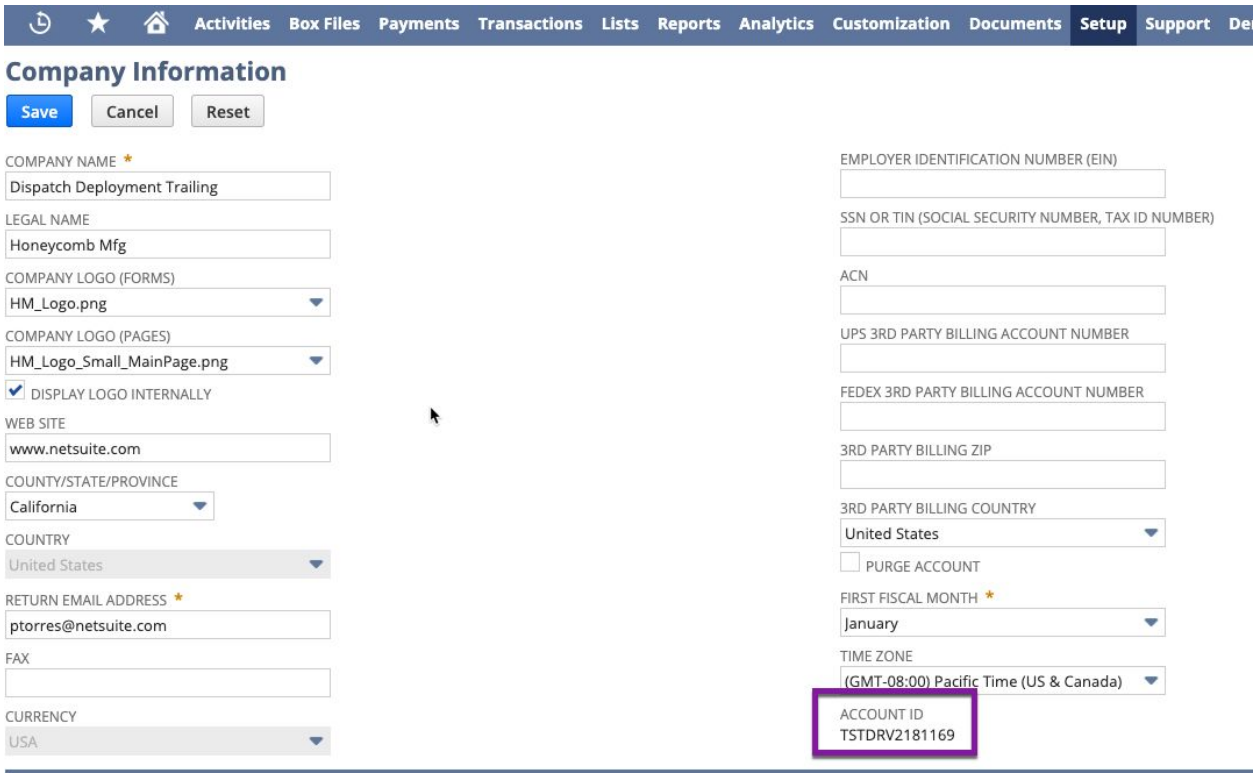
Create a role (TBA Role) with selected permissions like Find Transactions, and Sales Order with full level.

To create the TBA Role - please follow this document -
https://drive.google.com/open?id=13Rl2SpjxVolotovPQHM-Wbh4CUtfA6ID

Required information:

1. Email with Admin privileges - [preferred email - installation@dispatchtrack.com]
2. Account ID
3. Consumer Key
4. Customer Secret
5. Token ID
6. Token Secret

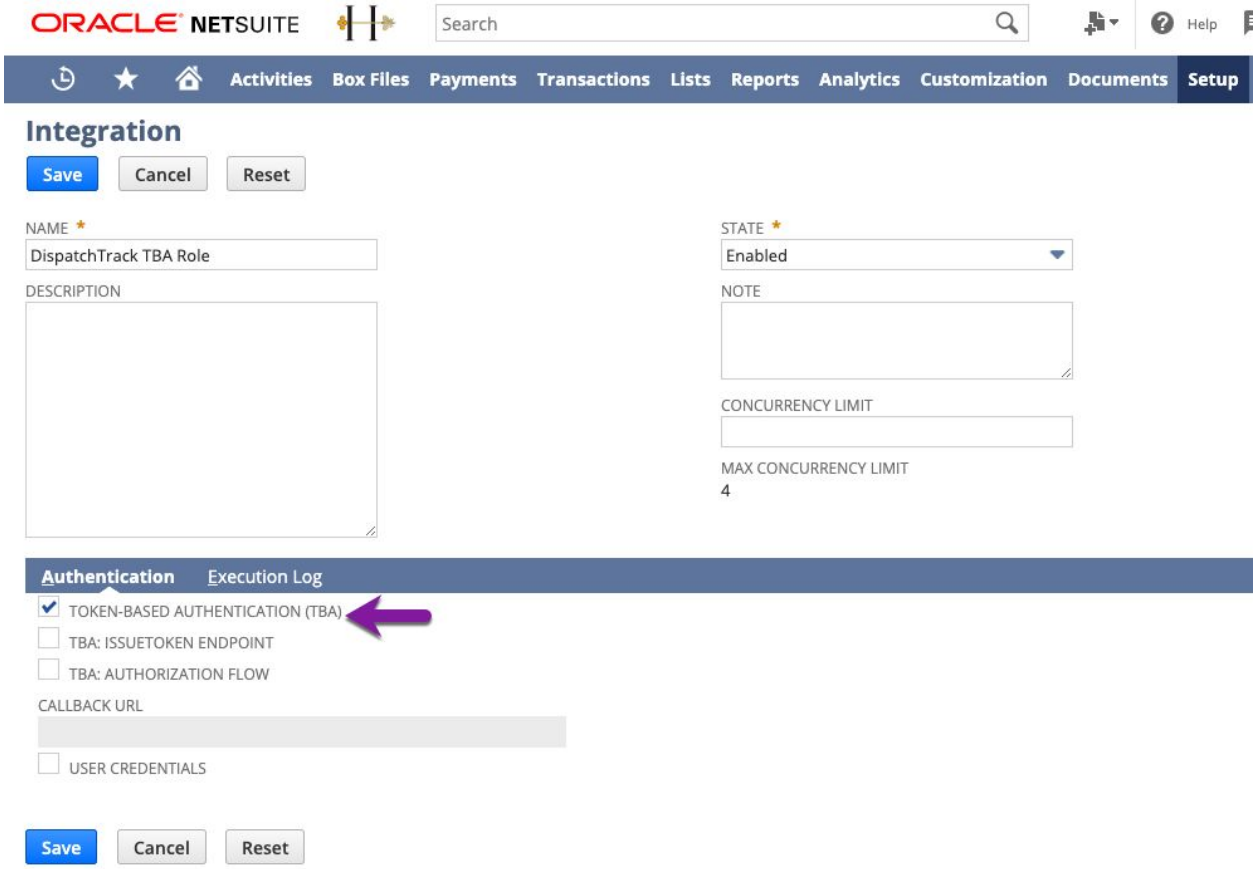
To retrieve the Account ID from Netsuite:
Main Menu -> Setup -> Company > Company Information -> you can find the Account ID - this is required for DispatchTrack configuration as well.

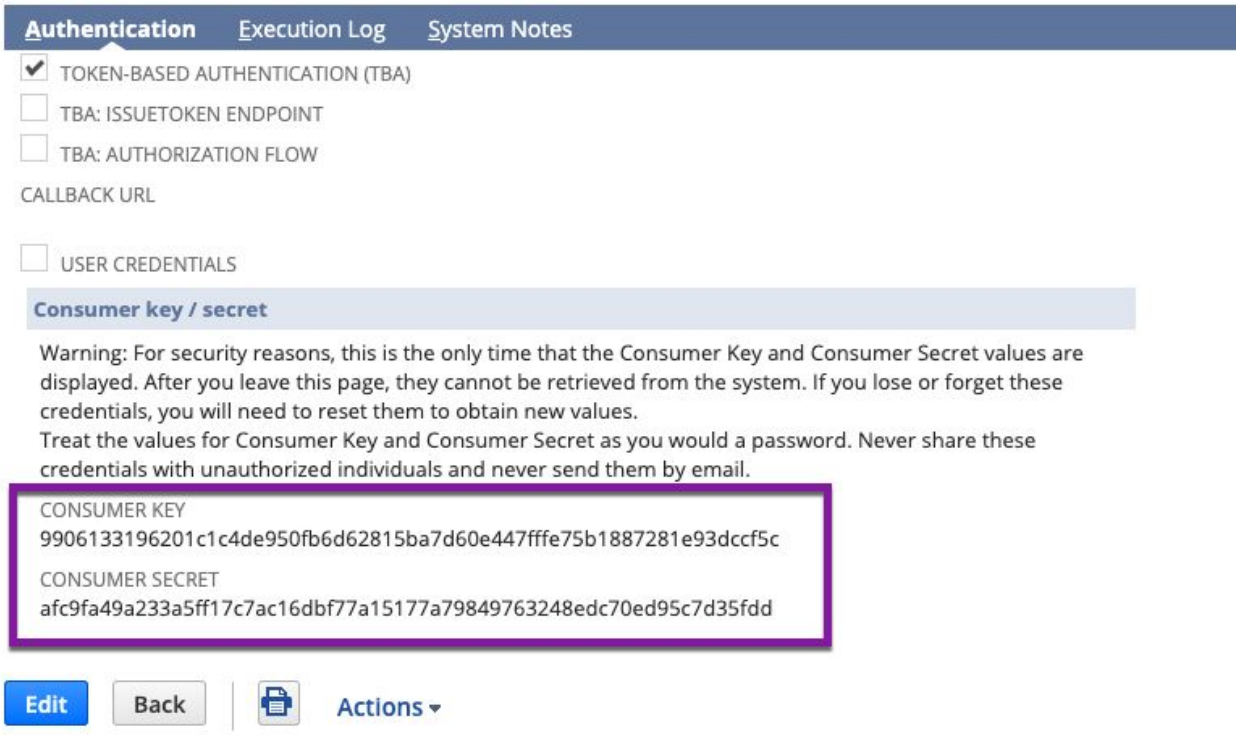


Create Integration in Netsuite to retrieve the Consumer Key and Consumer Secret:
Goto Setup -> Integration -> Manage Integration -> New

Create an integration with Token Based Authentication (TBA), after hitting the save button - it will generate the Consumer Key and Consumer Secret keys. Please copy it before leaving the page.

(**Note**: Consumer Key and Consumer Secret will display only once upon saving, If the Consumer Key and Consumer Secret values needs to be changed - there is an option to regenerate keys - which is **Reset Credentials**)



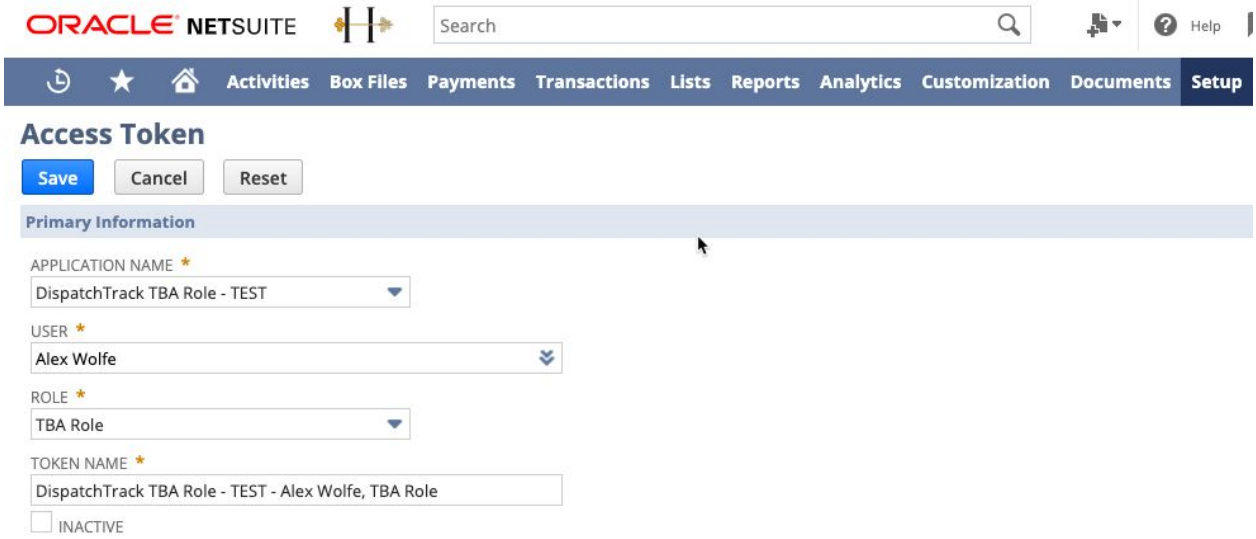


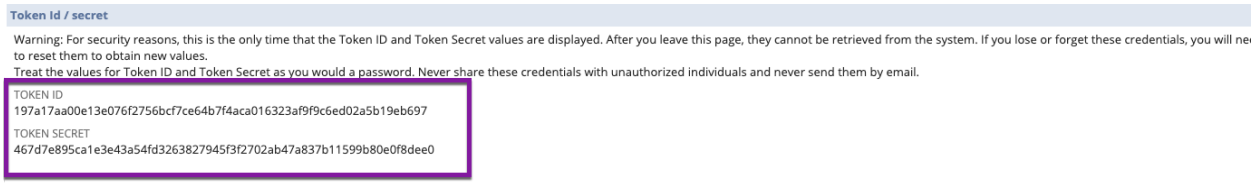
Create AccessToken to retrieve Token ID and Token Secret:

Goto Setup -> Users/Roles -> AccessToken -> New

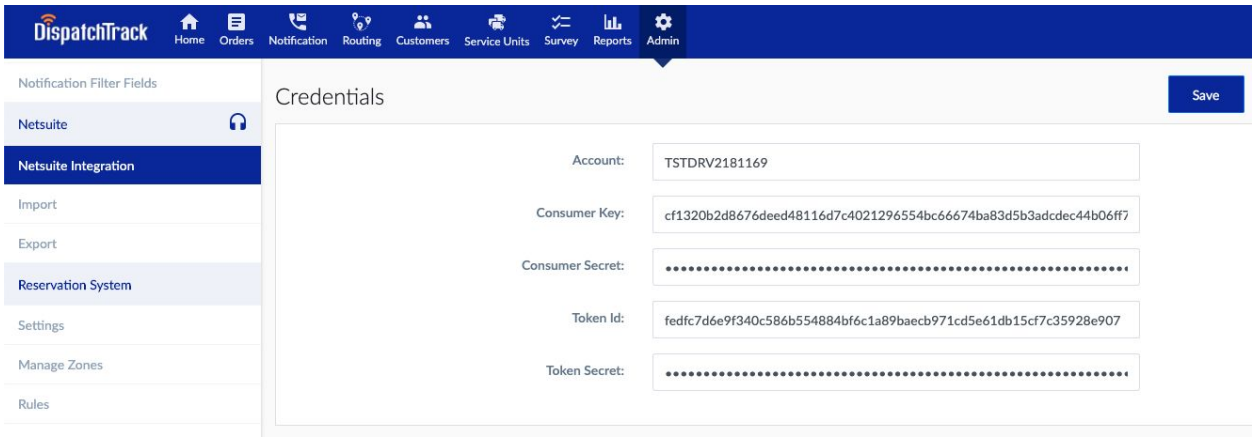
Create access token with user and role (TBA Role which created earlier), after hitting the save button - it will generate the Token ID and Token Secret keys. Please copy it before leaving the page.

(**Note**: Token ID and Token Secret keys will display only once upon saving).





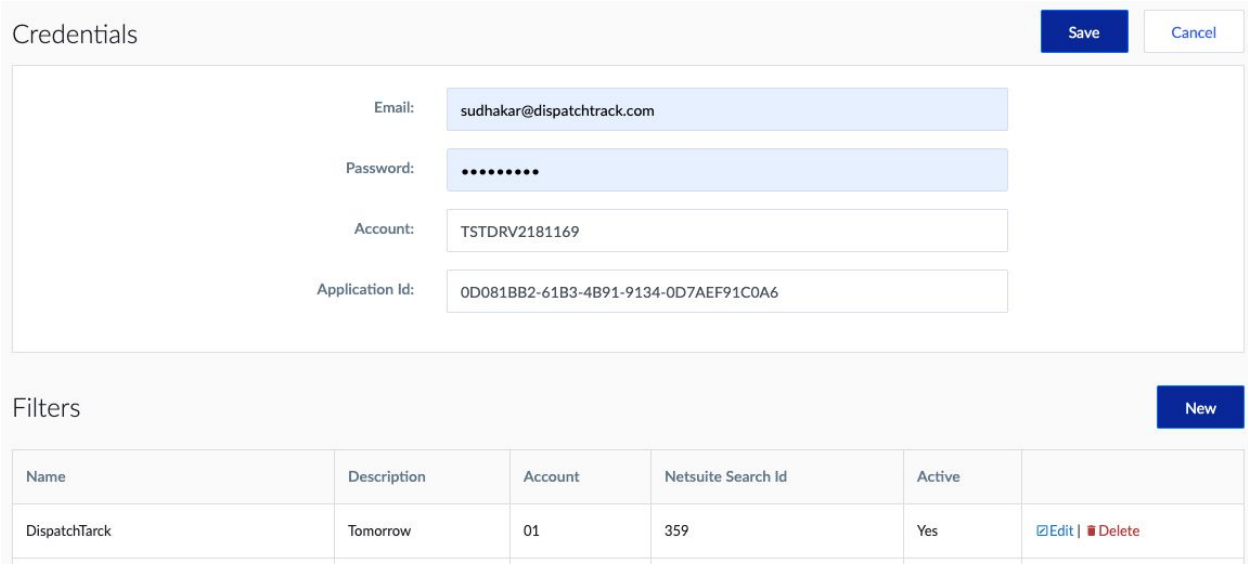
In DispatchTrack under the Admin Tab -> Netsuite Integration - please fill all the information retrieved from Netsuite as mentioned above:
[Account ID, Consumer Key, Consumer Secret, Token ID, and Token Secret]



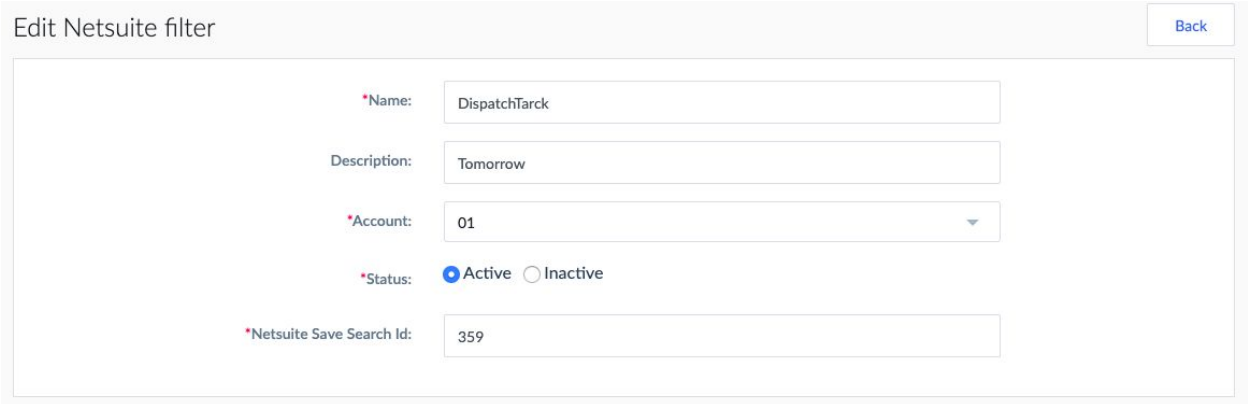
To add the Saved Search ID in DispatchTrack:

To setup the Saved Search ID in DispatchTrack, please goto the Admin Tab -> Netsuite Integration Screen -> click on New button to add new Search ID's.

Screen 1:



Screen 2: If Accounts is not enabled the Account field will be disabled.
Note - We support multiple Search ID's for single Account.

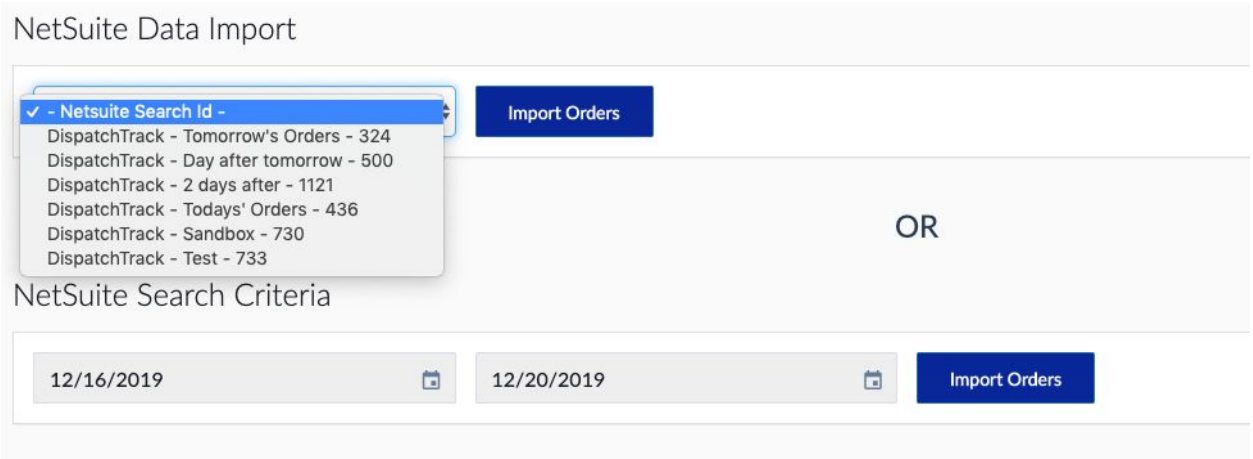


Once the Search ID is created under Admin Tab on the import Screen, you can see a drop down with the list of search ID's created.

Select the search id from the drop down and click on import orders, we will look for the saved search in Netsuite and if any order present in the saved search (Netsuite) will be imported to DispatchTrack.

(**Note** - In DispatchTrack, you can map as many as Saved Search ID as required)

Also, additionally we are supporting a Date range filter option to fetch the Sale Orders from Netsuite - it just look for all the Sale Orders within this delivery date in Netsuite regardless of any Saved Search.



Here are the fields we support importing into DispatchTrack from Netsuite. Some are custom fields which I have added the Netsuite Field ID's.

Note - the Order items are imported if the Fulfilled column is 0 and blank. If the Fulfilled column has any other value like 1 or 2, etc. - we will not pull into DispatchTrack.

Order Info:
Order Number
Total Amount

Customer Info:
Customer Name
Customer Address
Customer City
Customer State
Customer Zip
Customer Phone1 - custbody13
Customer Phone2 - custbody14
Customer Phone3 - custbody15
Email

Order Items info:
Items description
Model
Item Quantity
Item Price
Sku Number
Item Cubes - custcol3

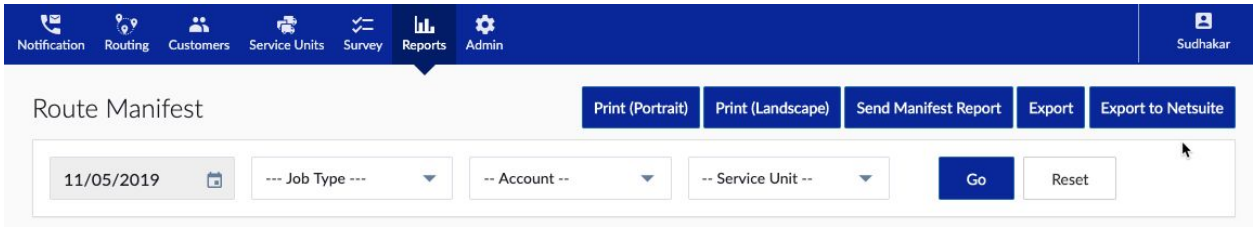
Custom fields:

Memo
Department
Internal

Note - We also have ability to map any Sale Order level custom fields from Netsuite to DisaptchTrack.

How to trigger the manifest from DispatchTrack to Netsuite:

To export the below supported details back to Netsuite -> Reports Tab -> Manifest -> choose the date and other filters as required and hit the GO button - now the button to export will appear “Export to Netsuite” - clicking on this button the below details will be sent to netsuite - [these fields should have to be already created in Netsuite]



Netsuite Export Setup:

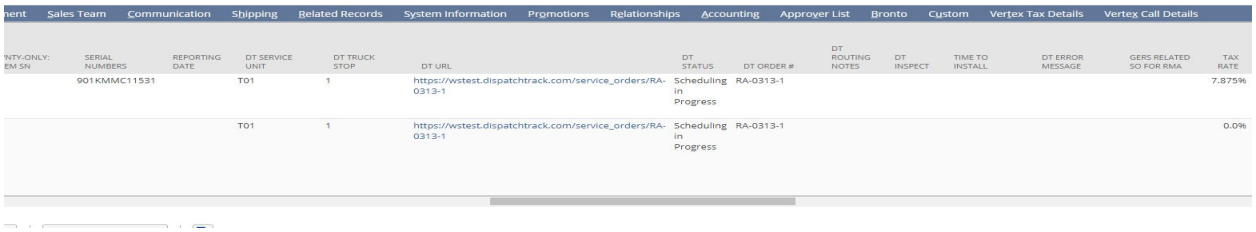
Here are the fields we support exporting from DispatchTrack to Netsuite. The Custom Fields at the Header and Line level should be created as exactly mentioned below.

Sale Order Level: Customization > List, Records, & Fields >Transaction Body Fields > New

1. **Truck** - Field ID in Netsuite should be created as custbody_service_unit_name
2. **Stop#** - Field ID in Netsuite should be created as custbody_stop_number
3. **Time Window** - Field ID in Netsuite should be created as custbody_time_window

Sale Item Level: **Customization > List, Records, & Fields >Transaction Line Fields > New**

1. **DT URL** - Field ID in Netsuite should be created as custcol_dt_url
2. **DT Service Unit** - Field ID in Netsuite should be created as custcol_dt_service_unit
3. **DT Truck Stop** - Field ID in Netsuite should be created as custcol_dt_truck_stop
4. **DT Order#** - Field ID in Netsuite should be created as custcol_dt_order
5. **DT Order Status** - Field ID in Netsuite should be created as custcol_dt_status
6. **DT Routing Notes** - Field ID in Netsuite should be created as custcol_dt_routing_notes
7. **DT Inspect** - Field ID in Netsuite should be created as custcol_dt_inspect
8. **DT Error Message** - Field ID in Netsuite should be created as custcol_dt_error_message



Import Api Responses on importing orders - you will see in the import screen:

Case 1:
When search id result records is 0 in netsuite
Expected response: No Search Results Match Your Criteria.

Case 2:
When netsuite credentials are wrong [which is configured in the Admin Tab]
Expected response: Need to display netsuite API response. - Invalid Email or Password.

Case 3:
When search id have only one order
Expected result: Fetched 1 orders

Case 4:
When search id have more than 1 orders
Expected result: Fetched XX orders

Case 5:
When search id results don't have internal id as a result
Expected result: In Savedsearch id criteria result please add internalId and try again.

Case 6:
If getting internal ids API call failed
Expected Result: API::Internal Ids call Failed

Case 7:
If getting records API call failed

Expected Result: API::Records Call Failed

Case 8:
Without selecting netsuite id in import screen, if you click on the import button
Expected Result: Please select Netsuite Search Id

Case 9:
If given search id is not present in netsuite
Expected result: A saved search with the internal ID {{netsuite id}} does not exist.
