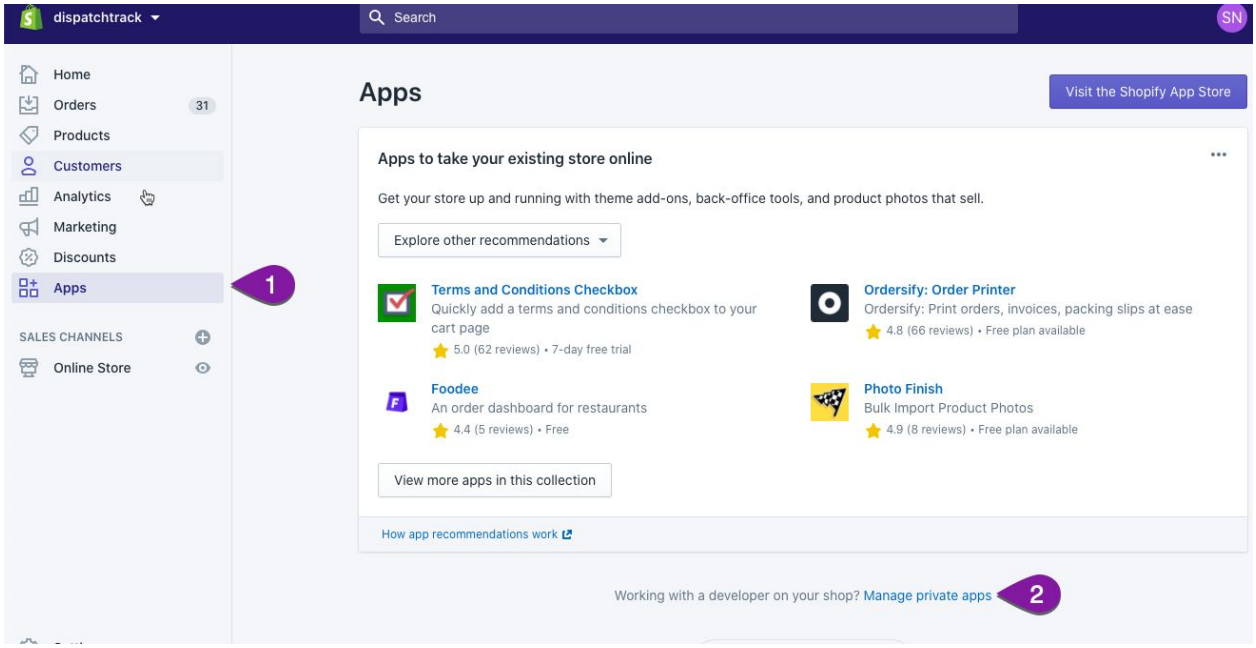
Shopify Integration Document

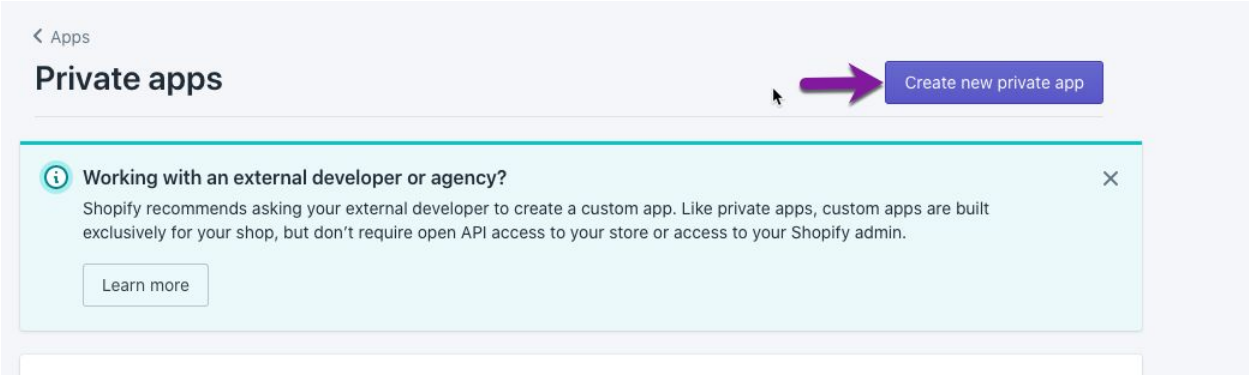
Step1:

To create an app for DispatchTrack in Shopify instance:

1. Once Login - look for apps in the left side navigation
2. Click on Apps - look for the “Manage Private Apps” link at the bottom of the screen.

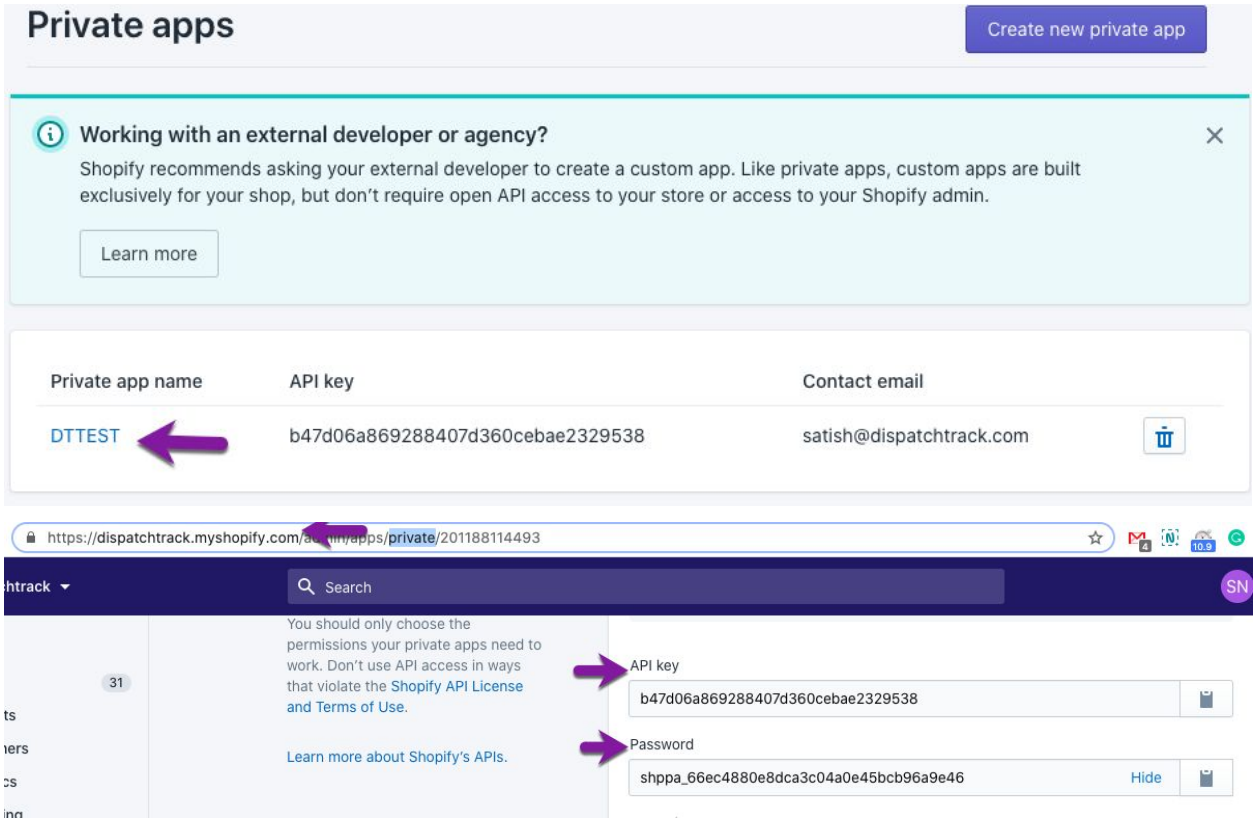


3. In the Manage Private Apps page - click on “**Create new private app**” button.



4. Now, fill the APP details, Set Read and Write access to the API, Orders, Customers, Product, etc., and save the configuration.
5. Once the app is created, from the list page, click on the app name and share the following:
    a. Sample Domain Name - it is the URL - dispatchtrack.myshopify.com
    b. API Key -b47d06a869288407d360cebae2329538

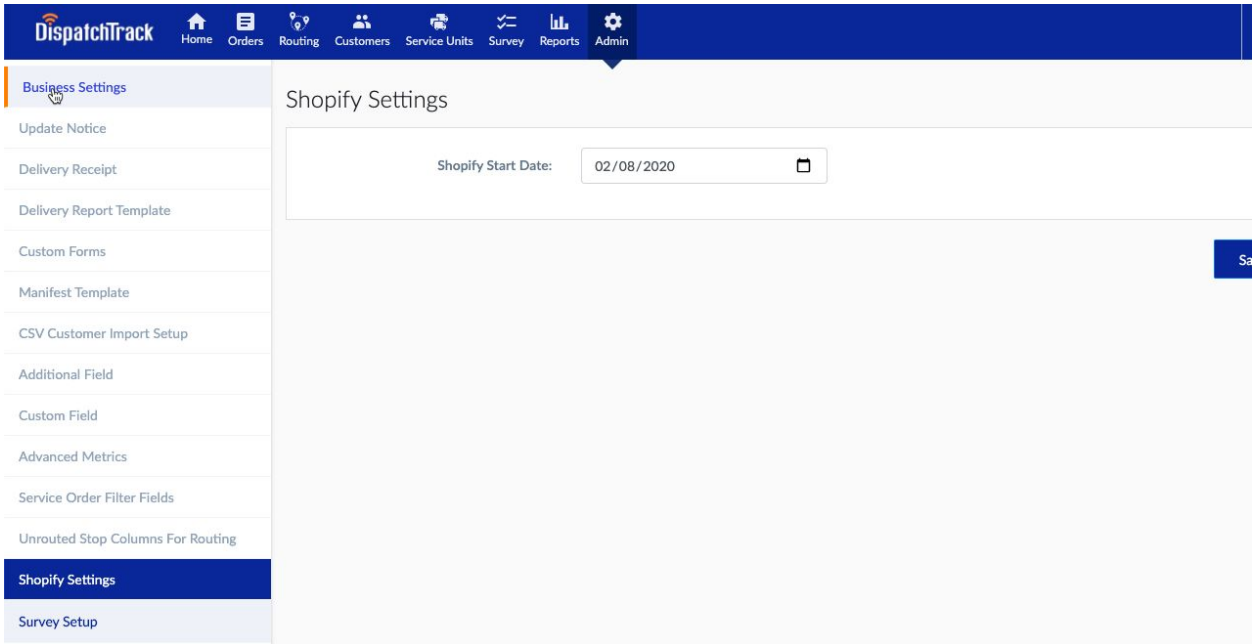
c. Password - 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



Step2:

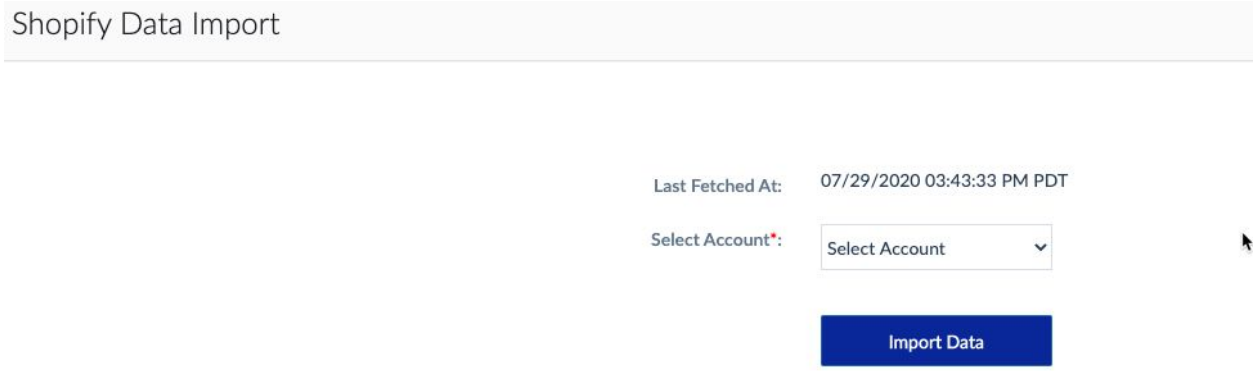
In the Admin Tab -> Shopify Settings:

Setup the Shopify Start Date - we will start importing the new orders from Shopify instance to DT from this date and we will import only the orders that are not imported to DispatchTrack (on re-import we check whether the order is already imported to DT and look for the updated time in Shopify and import only the new and updated orders from this start date).



Step3:

To Import Orders - Goto the Orders Tab -> click on the import button, choose the Account if enabled and click on the **import data** button - the orders will flow from Shopify to DispatchTrack.



These are the information we import from Shopify to DispatchTrack:
Order Level Details:
Order Number
Requested Date
Delivery Type
Notes

Customer Level Details:
Customer name
address1
city
state
zip
phone1
email
latitude
longitude

Item Level Details:
serial_number
description
quantity
price
