MFRM EDI Alert:

1. SFTP Connection Alerts

These alerts indicate a failure in connecting to or uploading files to the customer's SFTP server.

Types of Alerts

a. EDI SFTP Connection Failure for 211:

→ DT is trying to connect to MFRM (DHL) SFTP to fetch the import file but is not able to establish a connection.

Sample OpsMon Alert Message:

> **Opsnotify** APP 5:01 PM
> MFRM EDI SFTP CONNECTION FAILURE
>
> Failed to connect to MFRM EDI SFTP at 2025-10-04 11:31:16 UTC while trying 211

Support Task:

ToDo- Steps:

1. **Notify DevOps Immediately**
    - Reach out to the DevOps team to confirm if there are any issues with connecting or logging into the customer's SFTP server.
    - Ask if they can manually log in and test the connection.

b. Failed to Upload EDI 997 to SFTP:

→ DT is trying to upload 997 (acknowledge file) to SFTP and receives a connection issue

Sample Alert Message:

Opsnotify APP 8:45 PM

UPLOAD MFRM 997 FAILURE

Failed to upload 997 at 2025-09-11 15:15:41 +0000

Support Task:

To-Do Steps:

1. **Notify DevOps Immediately**
    - Reach out to the DevOps team to confirm if there are any issues with connecting or logging into the customer's SFTP server.
    - Ask if they can manually log in and test the connection.
    - Follow up with DevOps until the issue is resolved.

c. Failed to Upload EDI 214 to SFTP:

→ Alert messages from DT to DHL SFTP

Sample Alert Message:

9:40 UPLOAD MFRM 214 FAILURE

Failed to upload customer_invitation_notification at 2025-09-12 04:10:15 UTC

An EDI-214 generation has exceeded the maximum retry attempts and has been marked as ERROR.

=== EDI-214 DETAILS ===

ID: 2236
Order Number: Testingretries17
Code: ramqa
Status: error
Type: order
Event: customer_invitation_notification

=== ADDITIONAL DATA ===

Extra: {"event":"customer_invitation_notification","org_order_number":"Testingretries17","unit":null,"date":null}

#<ExportOrder id: 2236, code: "ramqa", order_number: "Testingretries17", instance_url: "dtrelease.dispatchtrack.com", event_time: "20250912:0937:LT", status: "error", done: false, created_at: "2025-09-12 04:07:06", updated_at: "2025-09-12 04:10:15", account: nil, order_status: "New", extra: {:event=>"customer_invitation_notification", :org_order_number=>"Testingretries17", :unit=>nil, :date=>nil}, type: "order", is_retry_required: true, retry_count: 3>

Please investigate this failed EDI-214 generation and take appropriate action.

Support Task:

To-Do Steps:

1. **Notify DevOps Immediately**
    - Reach out to the DevOps team to confirm if there are any issues with connecting or logging into the customer's SFTP server.
    - Ask if they can manually log in and test the connection.
2. **If there is no connection issue:**
    - Ask the team to **Retry the Alert Upload**.
    - Provide DevOps with the following details from the alert message:
        - **ID**
        - **Order Number**
        - **Event Type**

2. B2C Connection Failure

→ This alert indicates that the EDI failed to connect or communicate successfully with the B2C Application

Sample Alert Message:

Opsnotify APP 6:59 PM

MFRM EDI B2C CONNECTION FAILURE

Unable to connect to B2C app while attempting MFRM EDI fetch information at 2025-09-11 13:29:19 UTC

An EDI-214 generation has exceeded the maximum retry attempts and has been marked as ERROR.

=== EDI-214 DETAILS ===

ID: 2210
Order Number: Testingretries17
Code: ramqa
Status: error
Type: order
Event: customer_invitation_notification

=== ADDITIONAL DATA ===

Extra: {"event":"customer_invitation_notification","org_order_number":"Testingretries17","unit":null,"date":null}

Updated At: 2025-09-11 13:29:19 UTC
Event Time: 20250911:1857:LT

=== FULL OBJECT INSPECTION ===

#<ExportOrder id: 2210, code: "ramqa", order_number: "Testingretries17", instance_url: "dtrelease1.dispatchtrack.com", event_time: "20250911:1857:LT", status: "error", done: false, created_at: "2025-09-11 13:27:58", updated_at: "2025-09-11 13:29:19", account: nil, order_status: "New", extra: {:event=>"customer_invitation_notification", :org_order_number=>"Testingretries17", :unit=>nil, :date=>nil}, type: "order", is_retry_required: true, retry_count: 3>

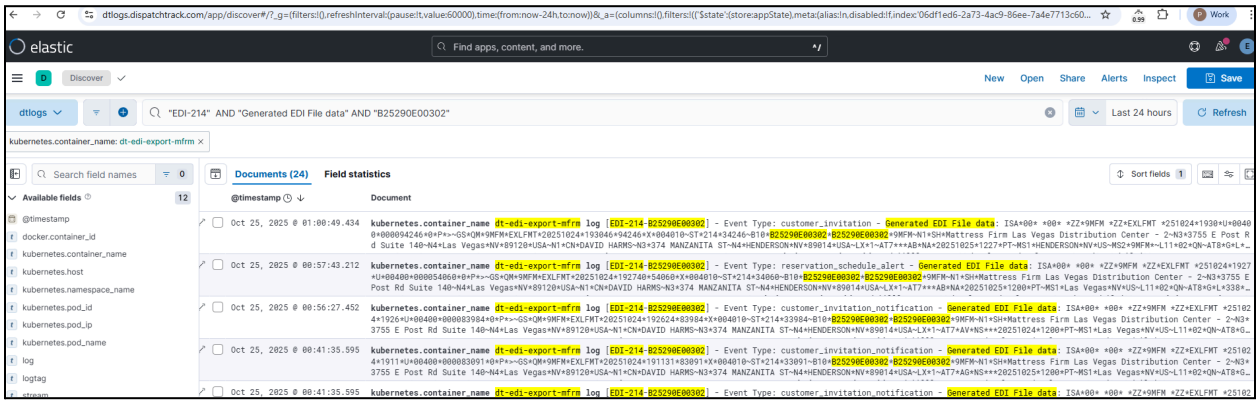
Please investigate this failed EDI-214 generation and take appropriate action.

Support Task:

To-Do Steps:

1. **Initial Action**
   - Contact DevOps and request them to **Retry** the alert.
   - Provide the following information to DevOps, this info is available in the OpsMon Alert:
     - **ID**
     - **Order Number**
     - **Event Type**
2. **Verify in Elastic Logs**
   - Login to Elastic and check if the alert was triggered:
     Elastic Discover Link
     Search parameters:
     "EDI-214" AND "Generated EDI File data" AND "ORDERNUMBER"
     You can find the order number in the OpsMon Alert.

Please refer to the below screenshot.



3. Devops will retry as per the above step. If that fails again, we will receive the same Alert again. This time escalates to DevOps to Retrigger.

Support has to give this info to DevOps:

Extract Key Information from Elastic

In Elastic, search for the **Order Number** and **Event Type** from the alert.

Elastic Link: [Export API Params]

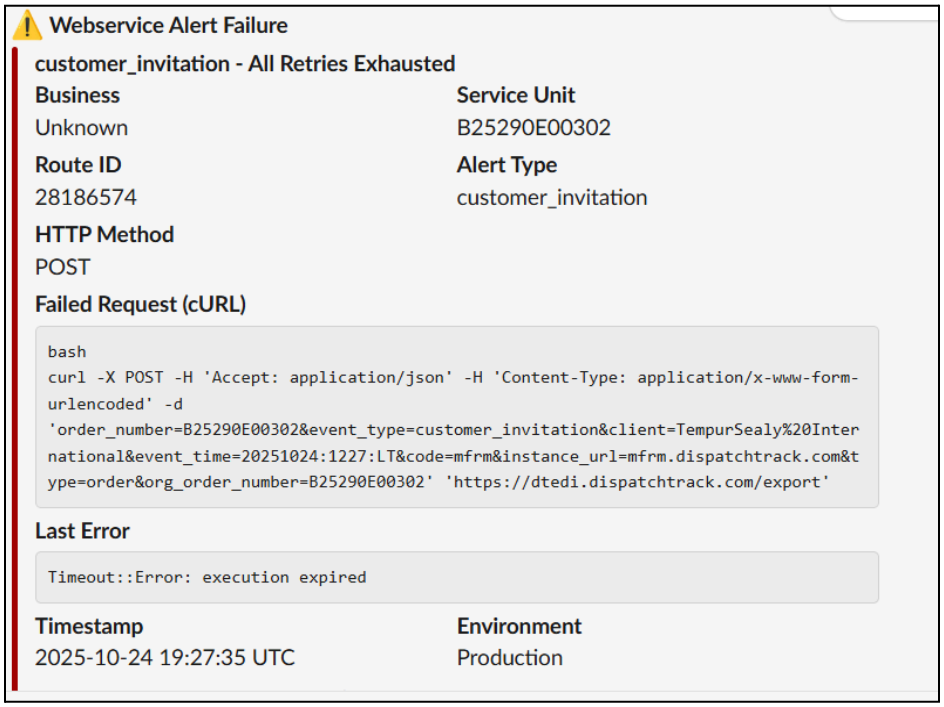
- Locate the corresponding log entry for "**Export API Params**."
- Copy and save the **Export API Params** details.

- `{"order_number"=>"B25290E00417", "event_type"=>"started", "client"=>"TempurSealy International", "event_time"=>"20251024:1205:LT", "code"=>"mfrm", "instance_url"=>"mfrm.dispatchtrack.com", "type"=>"order", "org_order_number"=>"B25290E00417", "controller"=>"exports", "action"=>"index"}`
- Contact DevOps again and request them to **Retrigger** the alert.
- Provide:
  - **ID, Order Number, Event Type**
  - **Export API Params information (from Elastic)**

4. Webservice Alert Failure

Indicates a failure in triggering the web service alert from DispatchTrack.

Sample Alert Message:



⚠️ Webservice Alert Failure

customer_invitation - All Retries Exhausted

Business	Service Unit
Unknown	B25290E00302
Route ID	**Alert Type**
28186574	customer_invitation

HTTP Method
POST

Failed Request (cURL)

```
bash
curl -X POST -H 'Accept: application/json' -H 'Content-Type: application/x-www-form-urlencoded' -d 'order_number=B25290E00302&event_type=customer_invitation&client=TempurSealy%20International&event_time=20251024:1227:LT&code=mfrm&instance_url=mfrm.dispatchtrack.com&type=order&org_order_number=B25290E00302' 'https://dtedi.dispatchtrack.com/export'
```

Last Error

```
Timeout::Error: execution expired
```

Timestamp	Environment
2025-10-24 19:27:35 UTC	Production

Support Task:

To-Do Steps:

1. **Identify the Orders**

    - Check the alert message for **Order Number starting with "B25"**. **NOTE:** The "B25" Orders are for DHL. Support has to escalate this Alert only if the Order number starts with B25. Other Orders are MFRM Orders that can be ignored.

2. **Provide Information to DevOps**

    - Send DevOps the following:

        - The list of all **B25.. order numbers** related to the alert.

        - The **complete error message** from the alert.

3. **For Route Start or Route Finish Alerts**

    - Log in to: https://mfrm.dispatchtrack.com

    - Search for the **Service Unit** (the name is provided in the alert).

    - Retrieve a list of all order numbers under that Service Unit starting with **"B25.."**.

Note: For Route Start and Route Finish Alerts, we will have multiple CURL commands. Please provide the order numbers to the Devops team and have them CURL command for each order number.

Only the order number has to be updated, other parameters will remain same if the alert type is route start or route finished.

To check if the EDI is triggered successfully
