Internal DispatchTrack SOP

Handling File Processing Errors and Exceptions for Samsung

Socket Errors

A socket error indicates that a file has been successfully received but not processed. In such cases:

1. Move the file to the incoming folder.
2. Monitor the system to confirm whether the order is processed successfully.
3. Update the ticket if processed; if not, escalate it.

Service Order Not Found

This scenario occurs when the order is not present in the instance, an invalid logistics code is provided, or there is a mismatch in logistics code usage. If a file is received for an order that does not exist in the system, it will not be processed.

1. Verify whether the order exists in the system.
2. Validate the logistics code in the payload:
    - If the logistics code is **"PUL"**, the order belongs to Pulse and should be present in both https://pulsesea.dispatchtrack.com and https://sea.dispatchtrack.com instances.

    - If the logistics code is **"XPO"**, the order belongs to RXO and should be present only in the https://sea.dispatchtrack.com instance.
3. Check for any mismatch where one logistics code is used for another flow, as this can result in this issue.
4. If the order is **not found or the logistics code is misaligned**, move the file to the **dt support folder**.
5. Include the Samsung team in the email and send them an update with the issue details.
6. Update the ticket and close it.

Example Error Message: ServiceOrder not found

Example Error Ticket Link: https://dispatchtrack.zendesk.com/agent/tickets/173560

Example Email:

1. **For non-existing Order:**
   We have observed errors in the following case:

   Invalid Order Number in ASN:

We received ASN data for the order mentioned below; however, the order number included in the request is not present in the instance. Despite this, we still received an ASN request for them, which failed on our end.

Order number received:

1. *00000ENGWVBQW000000000_RXO*

Could you please check with your team?

2. **For Invalid logistics code:**

We have observed errors in the following case:

Invalid Logistics Code in ASN:
We received ASN data for below orders, where the order numbers sent are associated with the Pulse, but the logistics code is sent as XPO(which is used for RXO orders), resulting in a failure on our end.

Order numbers received:

1. *17635899997693120203*
2. *17635899997623621343*
3. *17635809935852244666*
4. *17635809935822025666*

Could you please check with your team? Let me know if you have any questions.

Update Received for Order Past Scheduled Status

When a file is received as an update to an existing order, the payload should be checked for the `pi_flag` field. A value of `"U"` indicates an update(Note: The Do_No should match the order present in the instance; only then it is an update for the existing order). If the order is already beyond the scheduled stage, the file will not be processed.

1. Check the `pi_flag` value to confirm whether it is an update.

2. Verify the current order status (e.g., In Transit, Started, Finished, Unable to Start, Unable to Complete).
3. If the order is beyond the scheduled stage, move the file to the **dt support folder**.
4. Include the Samsung team in the email and send them an update with the issue details.
5. Update the ticket and close it.

Example Error Message: failed

]
},
:params => {
"code" => "sea",
```

Example Email:

*We have received an order update import payload for the order 17506857877347d088e9_PULSE , in which an update was received for the existing **tpljob_id**, with the **PI** flag set to **"U",** but the order status is in **Finished** status.*

For reference, the DO No and Order Number sent were 8679055328 and 17506857877347d088e9_PULSE, respectively. Please let me know if you have any questions.

New DO Number for Existing Order

If a new DO number is received for an existing order that is already beyond the scheduled stage, the file will not be processed.

1. Verify that the order already exists in the system.
2. Check the current order status.
3. If the order is beyond the scheduled stage, move the file to the **dt support folder**.
4. Include the Samsung team on the email and send them an update with the issue details.
5. Update the ticket and close it.

Example Ticket Link: https://dispatchtrack.zendesk.com/agent/tickets/168104

Example Email:

We have received a New DO order import payload for the order 17506857877347d088e9_PULSE , in which a new DO No was sent for an existing tpljob_id, with the PI flag set to "PU", but the order status is in Finished status.

For reference, the DO No and Order Number sent were 8679055328 and 17506857877347d088e9_PULSE, respectively. Please let me know if you have any questions.

Service Order Item Not Found

This issue occurs when an ASN file contains an SKU that is not present in the corresponding order. Since the SKU cannot be matched, the file will not be processed.

1. Validate the SKU in the file against the order details.
2. If the SKU is not present in the order, move the file to the **dt support folder**.
3. Include the Samsung team on the email and send them an update with the issue details.
4. Update the ticket and close it.

Example Error Message: *ServiceOrder item not found*

Example Error Ticket Link: https://dispatchtrack.zendesk.com/agent/tickets/168922

Example Email:

We've observed errors in the following case related to an invalid SKU number during the ASN import.

An ASN import was received for a Pulse order where an SKU was included that does not exist in the corresponding order within DispatchTrack, resulting in a failure on our end.

- *SKU Sent: DVG55A7300E/A3*
- *Associated Number Field: 0BBR5BCY700118*
- *Order ID: 1760280726092e8471f6_PULSE*

Communication

All communication with the Samsung team should be included within the same alert ticket.

1. Share issue summary, order/DO reference, and reason for failure.
   Example Ticket: https://dispatchtrack.zendesk.com/agent/tickets/178610
2. Do not include internal details such as S3 locations or system workflows.
3. Add the following recipients in all communications:
   - chenjuei.h@partner.sea.samsung.com (Ricky)
   - e.ostrowski@partner.sea.samsung.com (Ed)
   - support@dispatchtrack.com
